

NAME

xplage – aircraft simulation track file format

SYNOPSIS

<Apache Documents>/track.csv

DESCRIPTION

This file contains lines of track information representing geographical and orientation data transmitted by an instance of the X-Plane® flight simulator and captured by the **xplage**(1) ‘moving map’ generator.

Each line in the file represents a single data capture interval, and is composed of the following comma-delimited fields:

time	time of sample in XML dateTime format
longitude	floating point value represented as string with six-decimal-digit precision
latitude	floating point value represented as string with six-decimal-digit precision
altitude	floating point value represented as string with six-decimal-digit precision
heading	floating point value represented as string with six-decimal-digit precision
roll	floating point value represented as string with six-decimal-digit precision
pitch	floating point value represented as string with six-decimal-digit precision

By default, the track file is deposited by the **xplage** process in the standard document directory for the Apache HTTP server on the target platform.

FILES

<Apache Documents>/track.csv comma-separated track data
